*Senior English Teacher*

**Annotation.** *This article examines the advantages of using artificial intelligence (AI) technologies in English lessons. The article analyzes the role of AI tools in personalizing the language learning process, increasing its efficiency, and increasing student motivation. It also examines the use of interactive AI platforms in lessons, automated assessment systems, and opportunities for adapting educational materials. The article provides practical recommendations for educators on the effective integration of AI technologies. As a result, it is emphasized that the English language teaching process can be made more qualitative, individual, and interesting with the help of AI technologies.*

**Keywords:** *English, artificial intelligence, language learning, pedagogical technologies, interactive learning, automated assessment, individual approach, learning motivation.*

Nowadays, the education system is undergoing rapid changes. The development of information and communication technologies and artificial intelligence (AI) has made it possible to radically update the educational process. Since English is an important tool for global communication and professional skills, its effective teaching has always been one of the main goals of education. With the help of AI technologies, teachers and students have the opportunity to implement the language learning process individually and interactively.

The purpose of the article is to analyze the advantages of AI technologies in English lessons, show the possibilities of their effective application, and provide practical recommendations for educators.

Artificial intelligence technologies are a set of systems that simulate human mental activity using machines and programs. AI is used in education in several ways: creating individualized learning plans, developing interactive exercises, automated assessment, and customizing learning materials.

With the help of AI, students can receive lessons tailored to their level of knowledge, which motivates them and makes the language learning process interesting. At the same time, AI allows teachers to save time and automate complex processes.

AI is used in teaching English through several key tools:

**Interactive platforms and chatbots:** Students can independently complete language exercises using AI chatbots. These exercises are tailored to their individual level of knowledge and provide immediate feedback.

**Automated assessment systems:** Grammar, writing, and pronunciation assessment systems speed up the learning process and provide fair evaluations.

**Personalized learning materials:** AI identifies the strengths and weaknesses of the student and prepares individual exercises and lessons for him.

**Language listening and vocabulary development:** AI-based programs adapt audio and video materials to the student's abilities, allowing them to improve pronunciation and vocabulary.

**Gamification and game-based exercises:** AI motivates students by making the learning process interactive and fun.

The main advantages of AI technologies in English lessons are:

**Individual approach:** Each student is provided with exercises and lessons tailored to their level of knowledge.

**Time saving:** AI reduces the teacher's workload by automatically assessing and creating lesson materials.

**Continuous feedback:** Students receive immediate information about the correct or incorrect answer as soon as they complete the exercises.

Fun and interactive learning: With the help of gamification and games, students approach language learning with high interest.

Extensive resources: AI platforms include materials from different countries, cultures, and language contexts.

Student progress tracking: Every change and result in the learning process is systematically recorded, which allows the teacher to effectively monitor.

There are several recommendations for the effective use of AI technologies: Use AI tools in the lesson with specific goals; for example, improving pronunciation, increasing vocabulary or grammar exercises.

Do not overly attach students to technology, maintain real human interaction and practical exercises.

Monitor the security of AI platforms and the protection of personal data.

Train teachers to use AI tools effectively and organize advanced training courses.

As for limitations, AI systems still cannot fully imitate the logical explanation and individual approach of a human educator. Therefore, it is advisable to use AI only as an auxiliary tool.

In conclusion, Artificial Intelligence technologies can radically improve the English language teaching process. They create a personalized learning process, increase motivation and make lessons interactive. With the help of AI, students will be able to learn the language effectively through exercises adapted to their level of knowledge. At the same time, teachers will be able to save time and automate complex processes through AI tools.

To effectively use AI technologies, educators must carefully plan lessons, take into account the individual needs of students and be aware of the limitations of technologies. Thus, AI makes English language teaching more qualitative, interesting and effective.
