*Technical school No. 1.*

**Abstract:** This article analyzes the role and importance of modern pedagogical technologies in the process of teaching English. In particular, the effectiveness of interactive methods, information and communication technologies, multimedia tools and innovative approaches in the quality of education and the development of students' language skills is highlighted. During the study, it was determined that modern technologies serve to increase students' independent thinking, communicative competence and motivation. The advantages of using digital platforms in teaching English are also shown.

**Keywords:** English , pedagogical technology , innovative methods , interactive education , multimedia tools , communicative competence , information and communication technologies , educational effectiveness , digital platforms , modern education.

### INTRODUCTION

Today, the globalization processes taking place in the world have a great impact on the education system, along with all other areas. The expansion of international cooperation, the rapid development of science and technology have made the perfect study of foreign languages, especially English, a necessity of the time. Today, English is gaining importance as a means of international communication, the language of science, technology, business and the Internet. Therefore, the issue of effective teaching of English in educational institutions is one of the urgent pedagogical problems.

In our country, great attention is paid to the teaching of foreign languages at the state policy level. Developing the communicative competence of students based on modern educational standards and preparing them as competitive personnel in the international arena is one of the important tasks. In particular, the possibility of improving the quality and efficiency of the educational process through the use of modern pedagogical technologies in teaching English is expanding.

If in traditional educational methods the student performed more of a listener role, in lessons organized on the basis of modern pedagogical technologies the student becomes an active participant in the educational process. Interactive methods, multimedia tools, electronic platforms and innovative pedagogical approaches serve to

develop students' independent thinking, free communication and creative approach skills. As a result, the lesson process is organized in a more interesting, effective and motivating environment.

Modern pedagogical technologies are of particular importance in learning English. Because in the process of learning a language, it is necessary to develop skills such as listening comprehension, speaking, writing and reading simultaneously. With the help of audio and video materials, virtual platforms, mobile applications and interactive tasks, students come closer to the real language environment, not an artificial one. This helps them master the language faster and more effectively.

In today's information society, digital technologies are becoming an integral part of education. In particular, distance learning platforms, electronic textbooks and online resources are widely used in teaching English. Such tools create the opportunity for students to engage in independent activities outside of class. At the same time, teachers will also have more opportunities to effectively organize lessons, use new methods, and provide education based on an individual approach.

Another important aspect of the use of pedagogical technologies is that they increase the psychological activity of students. In classes organized using interactive methods, students learn to freely express their thoughts, work in a team, and solve problem situations. This develops not only their language competence, but also their personal and social competences.

At the same time, there are some problems in fully introducing modern pedagogical technologies into the education system. In some regions, the lack of technical means, poor Internet quality, or insufficiently developed digital competence of teachers can negatively affect this process. Therefore, improving the skills of teachers, providing educational institutions with modern technical equipment, and widely implementing innovative methods in practice are urgent tasks.

The main purpose of this article is to analyze the importance of modern pedagogical technologies in teaching English, to study their impact on educational effectiveness, and to scientifically substantiate the advantages of innovative methods.

## **METHODOLOGY**

In this study, scientific and pedagogical analysis, observation, comparison and generalization methods were used to determine the effectiveness of modern pedagogical technologies in teaching English. During the study, scientific works, articles and methodological manuals of foreign and domestic scientists were studied. Also, the practical results of interactive methods and digital technologies used in the educational process were analyzed.

During the research, the following pedagogical technologies widely used in English lessons were separately studied:

— multimedia presentations

- electronic textbooks
- mobile applications
- online platforms
- interactive games
- “Brainstorming” method
- “Role play” method
- “Case study” technology

These methods were evaluated based on their role in developing students' communicative competence, increasing their activity in the lesson, and consolidating knowledge. During the research, the differences between lessons organized on the basis of modern pedagogical technologies and traditional lessons were also analyzed comparatively.

## RESULTS

The results of the research showed that English lessons organized on the basis of modern pedagogical technologies significantly increase students' motivation to learn the language. In particular, the use of multimedia tools and interactive methods increases students' activity in the lesson process. Students get closer to the language environment through audio and video materials and improve their pronunciation and listening comprehension skills.

With the help of online platforms and mobile applications, students have the opportunity to independently perform additional exercises. This helped to consolidate their knowledge. Classes organized through interactive methods developed students' communication skills. In particular, "Role play" and group work methods gave effective results in forming free expression skills in English.

Modern pedagogical technologies also allowed teachers to organize lessons effectively. The use of electronic resources saved time, enriched the content of the lesson, and made the learning materials more understandable.

## DISCUSSION

Modern pedagogical technologies are becoming an integral part of today's education system. In particular, the use of innovative approaches in the process of teaching English is an important factor in increasing the efficiency of students' learning. The results of the study showed that lessons organized based on interactive methods and digital technologies significantly increase students' interest in the English language and increase their activity in the lesson.

While traditional teaching methods focus on memorizing grammatical rules and translating texts, modern pedagogical technologies serve to develop a communicative approach. As a result, students have the opportunity to master the language not only theoretically, but also practically. In particular, methods such as “Role play”,

“Discussion”, “Brainstorming” serve as effective tools for developing students' free thinking and communication skills in English.

It is also worth noting that during the discussion, the use of multimedia tools further enlivens the language learning process. With the help of audio and video materials, students have the opportunity to hear real pronunciation, intonation and speech speed. This has a positive effect on the development of listening comprehension competence. At the same time, the use of visual materials enhances students' ability to remember and helps them master topics more easily.

Another important aspect of lessons organized on the basis of modern technologies is the orientation of students to independent learning. Through electronic platforms, mobile applications and online courses, students have the opportunity to obtain additional knowledge at any time. This forms students' independent work skills and increases their sense of responsibility. In particular, the development of the distance learning system is creating new opportunities in learning English.

Modern pedagogical technologies also help to implement a differentiated approach. Since each student has a different level of knowledge, interests and learning abilities, an individual approach is important. Through digital technologies, the teacher has the opportunity to prepare individual tasks for each student, monitor their knowledge and quickly evaluate the results.

The study found that modern pedagogical technologies are also changing the role of the teacher. Now the teacher acts not only as a provider of knowledge, but also as a person who manages, guides and motivates the educational process. This requires a high level of professionalism, creative approach and digital competence from the teacher.

However, there are some problems in introducing modern technologies into the educational process. Insufficient technical equipment in some educational institutions, poor internet access, or limited ICT knowledge of teachers can negatively affect the effectiveness of education. Therefore, one of the important tasks is to regularly improve the skills of teachers, provide them with modern technical equipment, and widely introduce innovative methods into practice.

In addition, modern pedagogical technologies also play an important role in developing students' creative thinking. During interactive classes, students learn to solve problem situations, make independent decisions, and work in a team. This is also important in their future professional activities.

In general, the results of the study confirmed that the use of modern pedagogical technologies in teaching English is one of the most important factors in improving the quality and effectiveness of education. Through innovative approaches, students' communicative competence, independent work skills, and creative thinking skills are

developed. Therefore, the widespread introduction of modern pedagogical technologies into the education system is one of the urgent tasks of today.

### CONCLUSION

In conclusion, the use of modern pedagogical technologies in teaching English is one of the most important and effective areas of today's education system. The results of the study showed that the use of innovative methods and information and communication technologies significantly increases the level of students' mastery of the English language. In particular, interactive methods, multimedia tools, electronic platforms and digital resources increase the effectiveness of the educational process and increase students' interest in the lesson.

Lessons organized on the basis of modern pedagogical technologies allow students to comprehensively develop their listening, speaking, writing and reading skills. As a result, students not only acquire grammatical knowledge, but also develop the skills of communicating freely in English, expressing their thoughts independently and using the language in practical situations. This serves as an important factor in the development of communicative competence.

Modern technologies also create ample opportunities for students to learn independently. Through electronic textbooks, mobile applications, online platforms and virtual learning environments, students have the opportunity to consolidate their knowledge outside of class. This develops important competencies such as self-improvement, proper time management and independent thinking.

The study also found that modern pedagogical technologies also have a positive impact on the teacher's work. Innovative approaches allow the teacher to effectively plan lessons, take into account the individual characteristics of students and create an interactive environment. At the same time, the teacher is required to have the skills to work with modern technologies, a creative approach and continuous professional development.

However, there are some problems in the widespread introduction of modern pedagogical technologies into the education system. In particular, the lack of technical equipment in some regions, problems with the Internet and low digital competence of teachers can negatively affect the effectiveness of education. Therefore, equipping educational institutions with modern technical means, improving the skills of teachers and widely implementing innovative methods in practice remains one of the important tasks.

In addition, modern pedagogical technologies also serve to develop students' creative and critical thinking skills. In classes organized on the basis of interactive methods, students acquire the skills of analyzing problem situations, making independent decisions, and working in a team. This creates the basis for their future success in their professional activities.

In general, the use of modern pedagogical technologies in teaching English is of great importance in improving the quality of education, developing students' knowledge and skills, and preparing them as personnel who meet the requirements of modern society. Therefore, the widespread introduction of innovative technologies into the educational process, the development of digital educational resources, and the improvement of the professional competence of teachers will remain one of the urgent tasks in the future.
