

## METHODOLOGY OF DEVELOPING ACMEOLOGICAL ACCOMPLISHMENT IN FUTURE TEACHERS

*Tuychieva Sabina Sherzodovna*

*Master of Kimyo International University in Tashkent*

**Abstract:** This article examines the methodology of developing acmeological accomplishment in future teachers. The research highlights the importance of professional competence, reflective thinking, and innovative pedagogical activity. Special attention is given to the formation of creative individuality and the achievement of the highest levels of professional development. The acmeological approach is analyzed as a key factor in ensuring the effectiveness of pedagogical activity and continuous self-improvement.

**Key words:** acmeology, future teachers, professional development, competence, innovation, reflection, pedagogy

**INTRODUCTION:** In the context of rapid modernization of the education system, the preparation of highly qualified teachers has become one of the most pressing issues. Today's teacher is not only a transmitter of knowledge but also a creator, innovator, and researcher. This requires a fundamentally new approach to teacher training, where the acmeological paradigm plays a central role.

The acmeological approach focuses on achieving the highest stages of personal and professional development. It integrates psychological, pedagogical, and social aspects of personality formation. In this regard, the development of acmeological accomplishment in future teachers becomes a strategic task of modern education.

Acmeology is a scientific field that studies the patterns, mechanisms, and conditions of human development at the highest stage of professionalism and personal maturity. In the context of teacher education, acmeology serves as a methodological foundation for understanding how future educators can reach the peak of their professional competence and pedagogical mastery.

The development of acmeological accomplishment in future teachers is a multifaceted and dynamic process that requires systematic integration of theoretical knowledge, practical experience, and personal growth. It is not limited to acquiring professional skills, but also includes the formation of a stable professional identity, value orientations, and the ability to self-regulate one's development trajectory.

Professional competence is considered the central pillar of acmeological development. It includes subject-matter expertise, methodological literacy, and pedagogical mastery. Future teachers must not only master academic knowledge but

also learn how to transform it into accessible, meaningful, and engaging learning experiences for students.

Competence also implies the ability to apply interdisciplinary knowledge, integrate modern educational technologies, and adapt teaching strategies to diverse classroom environments. A competent teacher demonstrates flexibility, critical thinking, and the ability to make informed pedagogical decisions in real time. Moreover, professional competence is closely linked with lifelong learning. In the modern educational landscape, knowledge becomes outdated rapidly; therefore, continuous updating of competencies is a necessary condition for maintaining professional relevance.

Reflection is a key mechanism in acmeological growth. It allows future teachers to critically analyze their own pedagogical actions, evaluate outcomes, and identify areas for improvement. Reflective thinking transforms experience into structured knowledge, enabling conscious professional development.

Reflective practice includes several levels:

**Descriptive reflection** – understanding what happened in the lesson or teaching situation

**Analytical reflection** – identifying causes and consequences of pedagogical actions

**Critical reflection** – evaluating the effectiveness of methods and strategies

**Predictive reflection** – planning future improvements and innovations

Through reflection, future teachers develop metacognitive awareness, which is essential for self-regulation, adaptability, and professional autonomy. It also strengthens emotional intelligence, as teachers learn to understand both their own emotions and those of their students.

One of the essential goals of acmeological development is the formation of creative individuality. In modern pedagogy, creativity is not considered an additional skill but a fundamental professional requirement. Teachers must be capable of designing innovative lessons, developing original teaching materials, and applying unconventional methods to solve educational problems.

Creative individuality is expressed through:

originality in lesson design

flexibility in pedagogical approaches

openness to experimentation

ability to integrate technology and traditional methods

Innovative thinking allows future teachers to move beyond standardized instructional models and develop personalized educational strategies that respond to the needs of learners. This also contributes to the humanization of education, where the personality of both teacher and student becomes central.

Motivation plays a decisive role in acmeological achievement. Without internal motivation for self-improvement, professional growth remains superficial. Future teachers must develop a strong internal drive for excellence, which includes both intrinsic and extrinsic motivational factors.

Intrinsic motivation is connected with personal satisfaction, interest in teaching, and the desire for self-realization. Extrinsic motivation includes professional recognition, career advancement, and institutional support.

Value-based orientation is equally important. Teachers must form a clear system of pedagogical values such as responsibility, respect for learners, commitment to education, and ethical integrity. These values guide professional behavior and ensure consistency in decision-making.

In the modern educational environment, digital transformation plays a crucial role in teacher development. Future teachers must be prepared to effectively use information and communication technologies (ICT) in their pedagogical practice.

Key technologies include:

interactive online platforms

learning management systems (LMS)

multimedia and simulation tools

artificial intelligence-based educational resources

These tools enhance student engagement, support differentiated instruction, and allow for more personalized learning experiences. At the same time, teachers must develop digital literacy and the ability to critically evaluate technological tools to ensure pedagogical effectiveness.

Acmeological development is influenced by a complex interaction of external (objective) and internal (subjective) factors.

**Objective factors include:**

quality of teacher education programs

availability of modern educational resources

institutional and methodological support

socio-cultural educational environment

**Subjective factors include:**

cognitive abilities

emotional resilience

motivation for self-development

personal aspirations and professional goals

The effectiveness of acmeological growth depends on the harmonious integration of these factors. Even in a well-equipped educational environment, lack of motivation or reflective ability may hinder professional development. Conversely, strong internal motivation can partially compensate for limited external resources.

Acmeological accomplishment is not a final stage but a continuous process of self-improvement. Future teachers must adopt a lifelong learning mindset, constantly updating their knowledge, skills, and pedagogical approaches.

Self-development includes:

participation in professional training and seminars

engagement in scientific and pedagogical research

peer collaboration and mentorship

self-assessment and goal setting

This continuous cycle of learning, practice, reflection, and improvement forms the foundation of professional excellence.

**Conclusion:** The acmeological approach provides a powerful methodological basis for the development of future teachers. It ensures the formation of professional competence, creative thinking, and readiness for continuous self-development. The implementation of this approach significantly improves the quality of education and prepares competitive specialists capable of meeting modern demands.
